

R12 deployment bumps up productivity at lighting giant's warehouse

A leading innovator in LED lighting manufacturing was struggling with the management of its warehouse, which is their primary distribution point. The operations at the warehouse were impacted as disparate systems were not yielding positive results leading to pilferage, logistical headaches, and deployment of excessive workforce. The challenge was to streamline operations and improve performance.

Approach

Swank studied the existing systems thoroughly and identified that the integration points between existing systems were too many, adding to maintenance and effort.

Swank recommended Oracle R12 1.3 and successfully implemented the system. It integrated the warehouse operations seamlessly with Finance and Manufacturing, while getting rid of disparate systems which needed strong integration with R12.

Solution

Swank implemented Oracle R12 1.3 including the following modules - Advanced Pricing, Order Management, Purchasing, MRP, MDS, Inventory, BOM, Work in Process, I Supplier, Engineering, Virtual Trader, Accounts Receivables, and Accounts Payables, including support for the go-live phase.

Swank helped with deploying the Reporting module for the company's lighting business, giving the company's management access to critical day-to-day information that enables decision making.

SwankTek is a multifaceted, premium technology services company based in Nutley, New Jersey. Over the 12 years since its founding, the company has successfully delivered solutions to Fortune 100 and industry leading companies in the world.
